THE SHIFT

AI Is Eating Everything Copyable

Support, design, copy, coding, entry-level roles — taken over by AI. Value migrates from copyable labor to the uncopyable person.

\$4.9T

2030 global AI economy

35%+

Automatable jobs

\$500B

Creator economy

→ **Scarcity becomes the only premium.**

The Stronger AI Gets, the More Personal IP Is Worth

Institutional forecasts (IDC · Stanford HAI · Goldman Sachs · WEF · McKinsey): AI economy soars, jobs restructure, personal brand becomes the exit.

Metric · forecast	2027	2028	2029	2030
● Global AI economic value	\$3.2T	\$3.8T	\$4.4T	\$4.9T
● AI market CAGR	25%	27%	28%	30%
● Workforce cut (forecast)	5–10%	10–15%	15–20%	20–30%
● Automatable jobs	20%	25%	30%	35%+
● Creator economy	\$400B	\$440B	\$470B	\$500B+
● AI-skill demand	High	Higher	Standard	Must-have

Professionals pivot to the Creator Economy: doctors · lawyers · accountants · teachers · realtors · agents all build personal IP — OneIP's users.

Sources: IDC / Stanford AI Index / Goldman Sachs / WEF / McKinsey (2024–2026). "Workforce cut" is a blended forecast range, not official data.

Only People & Fans Can't Be Replaced

● Personal IP / Creators

AI can assist, but can't BE that person. Personality, story, trust — inherently unique.

● Fan Data / Fan Emotion

Real attention & emotion can't be generated. AI amplifies — it doesn't replace.

Pros pivot to creators

Doctors, lawyers, accountants, teachers, realtors, agents — all building personal brands.

Takeaway

Demand for personal brands is exploding.

OneIP: Turn Everyone Into a Company

One platform that turns personal brand into an issuable, tradable, monetizable asset — OPC, you are the company.

oneIP.ai

Create IP · Supply

- AI avatar · content at scale
- Standardized IP packs
- Compounding supply

oneIP.io

Trade IP · Liquidity

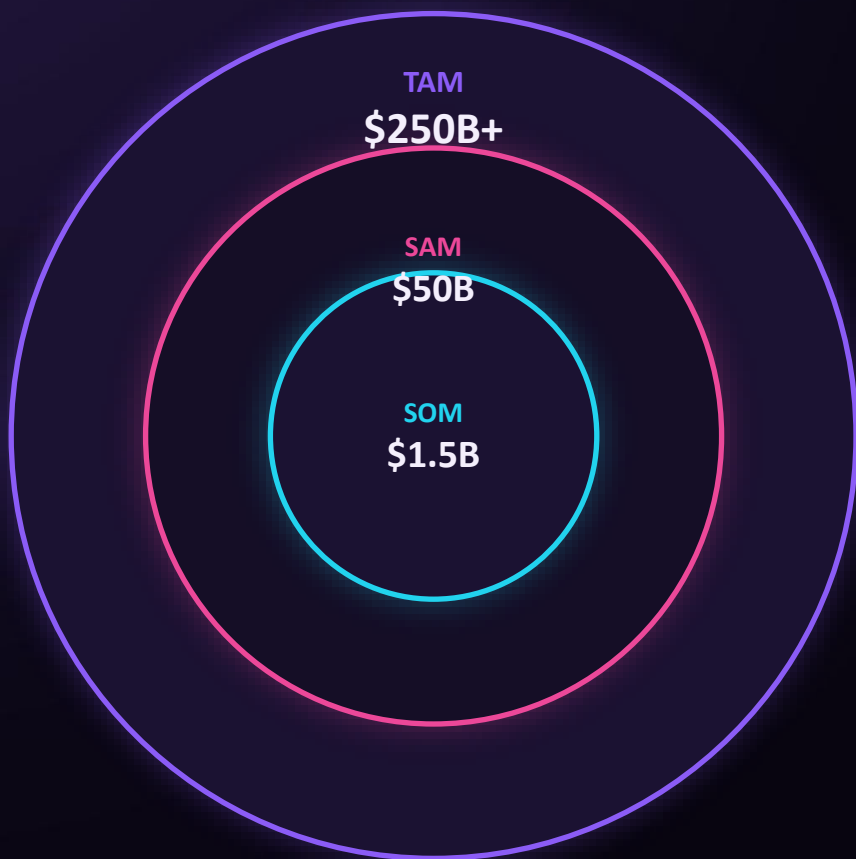

- 1-click launch · terminal
- Connect fans · co-create
- Fees + liquidity

Create IP × Trade IP = a real-asset-backed IP economy.

A Trillion-Dollar IP Economy, Moving On-chain

The creator economy is surging; making fan emotion priceable & tradable is its biggest unmet gap.

● TAM · Global creator economy

● SAM · Tokenizable IP market

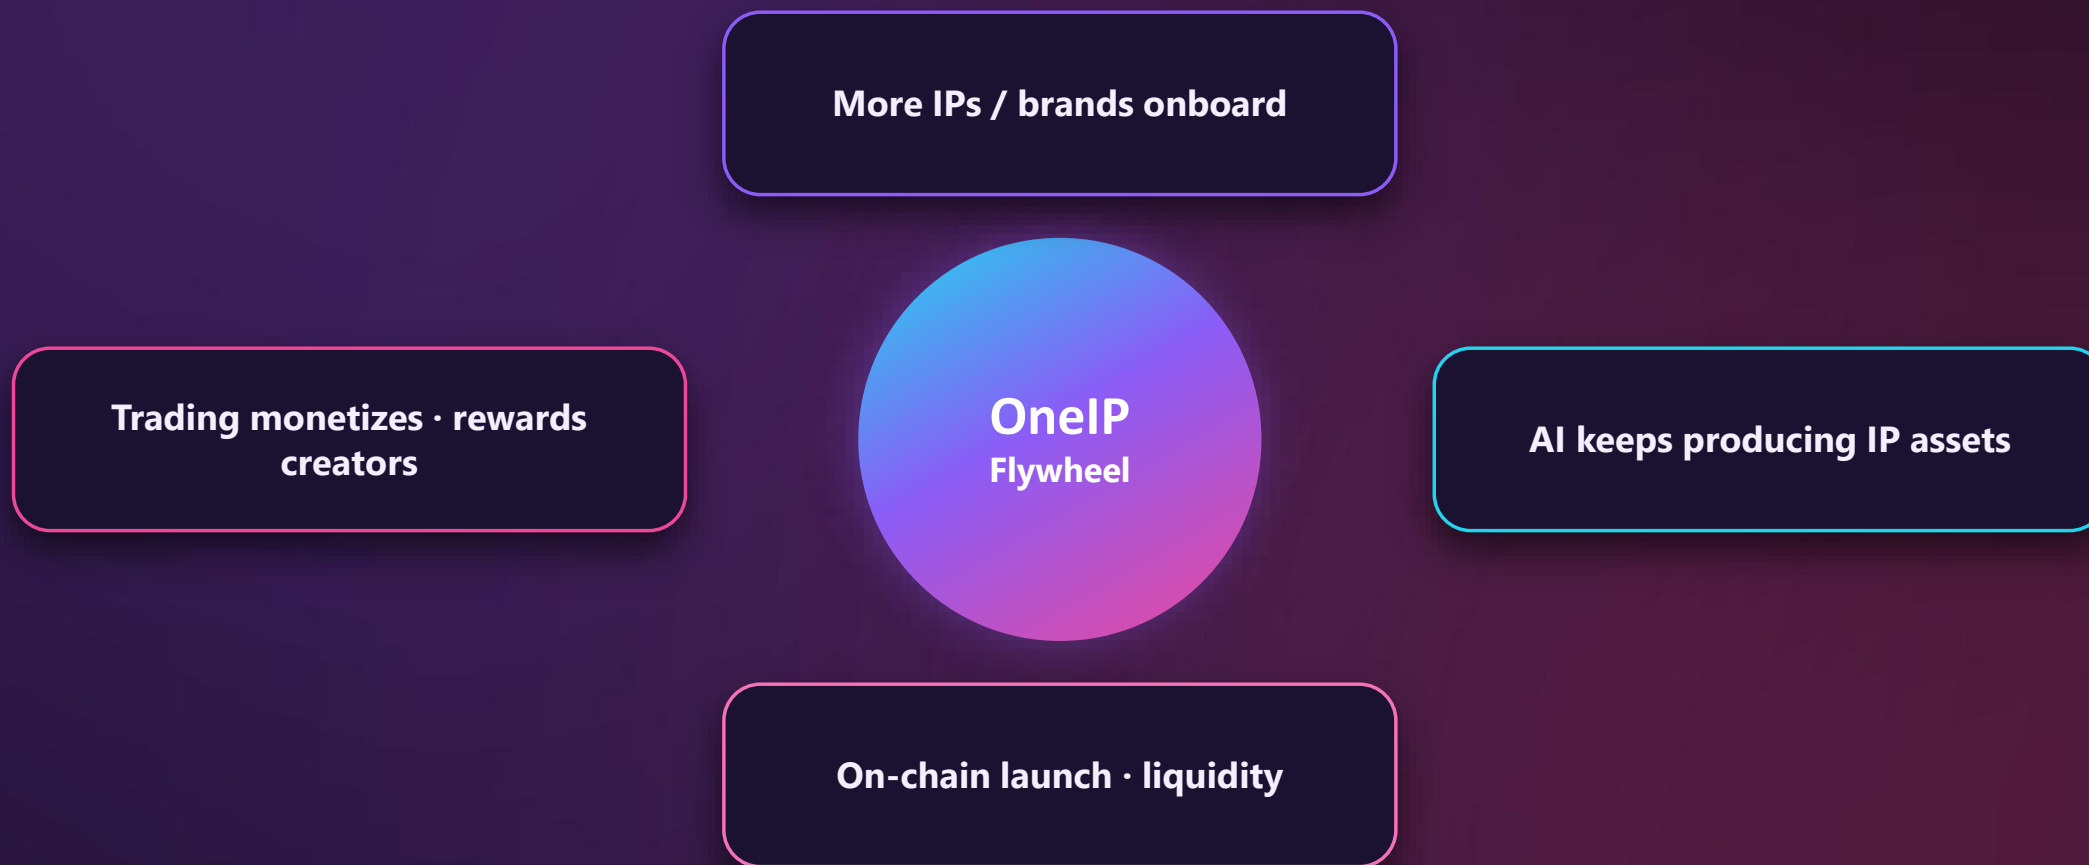

● SOM · Obtainable in 3 yrs

Drivers: ~20% creator-economy CAGR · surging fan-token demand · KOL supply · fans pay for belonging

* Public-data estimates.

AI Supply × On-chain Liquidity = Flywheel

Others just launch tokens (speculative). We secure real supply via AI and liquidity via chain.

Web4: Fans as Assets, an IP Economy at Scale

Once enough brands, influencers and fan data aggregate, scale effects drive exponential revenue.
